General Information

Ted Smith, on behalf of Salado Independent School District, has submitted an application to the Clearwater Underground Water Conservation District (CUWCD) on February 13, 2025, for an operating permit for three existing wells (N3-23-006G, N3-23-007G, N3-23-008G), and an amendment to aggregate these operating permits to a current HEU and operating permit for well N2-03-004G.

An operating permit of 1.5 acre-feet per year is being contemplated for three existing wells (N3-23-006G, N3-23-007G, N3-23-008G). These permits would be aggregated with the current 1.5 acre-feet per year HEU permit and 0.71 acre-feet per year operating permit for a total of 6.71 acre-feet per year as a four-well aggregated system to produce groundwater for irrigation of the Salado ISD student athletic fields. Each of the wells are completed to the Edwards BFZ aquifer with a maximum 1¼-inch column pipe at a maximum pumping rate of 10 gallons per minute in the Edwards BFZ Management Zone described in District Rule 7.1.

Well N2-03-004G is located on a 12.09-acre tract (PID #102187) on Salado School Road, Salado, Texas, Latitude 30.950109°/Longitude -97.540834°.

Well N3-23-008G is located on a 12.09-acre tract (PID #102187) on Salado School Road, Salado, Texas, Latitude 30.951391°/Longitude -97.542874°.

Well N3-23-006G is located on a 33.503-acre tract (PID #102190) on 575 Salado School Road, Salado, Texas, Latitude 30.949184°/Longitude -97.542085°.

Well N3-23-007G is located on a 33.503-acre tract (PID #102190) on 575 Salado School Road, Salado, Texas, Latitude 30.949149°/Longitude -97.545345°.

Per Rules 6.9 and 6.10

In deciding whether or not to issue a permit, the Board must consider the following:

- 1) **Does the application contain all the information requested, is the application accurate? Does it meet spacing and production limitations identified by District Rules, and does it conform to all application requirements which include public notification and accompanied by the prescribed fees? TWC 36.116(a)(1), TWC 36.113(d)(1), Rule 6.9.1(a)(b)(1)(2), Rule 6.9.2(a)-(f), Rule 6.10.24(a)(b), and Rule 9.5.1-2.**

The application has been deemed administratively complete and the requested information necessary to proceed is as follows:

- The existing well meets the tract size requirements of 2-acres and minimum well spacing of 150-feet for a maximum 1¼-inch column pipe associated with District Rule 9.5.2 for the Edwards BFZ Aquifer.
- The application fee of \$600.00 for the Operating Permit has been received, 3/06/2025.
- The applicant and their representative have conducted all notification requirements in a proper manner per District Rules.

- 2) **Is the proposed use of water dedicated to a beneficial use? (TWC 36.113(d)(3), District Rule 6.10.24(d), and District Rule 9.5.2 authority to serve as a public water supply per PUC and TCEQ requirements.**

The proposed production of groundwater is for irrigation of the Salado ISD athletic fields and domestic use for the Salado FFA livestock barn.

3) Has the applicant agreed to avoid waste and achieve water conservation? (TWC 36.113(d)(6) and Rule 6.10.24(f))

The applicant should testify that by signing the application form, they understand, per District Rule 6.10.24(f), that they will comply with the District's Management Plan and District Rules, effective October 11, 2023. The applicant or his representative should testify to the importance of water conservation measures. The District expects that the applicant states in testimony they do not intend to utilize the groundwater for extensive landscape purposes and agrees to describe that their use of the groundwater will not be deemed a waste.

4) Has the applicant agreed that reasonable diligence will be used to protect groundwater quality and that the applicant will follow well plugging guidelines at the time of well closure? (TWC 36.113(d)(7) and Rule 6.10.24(g)) and Rule 9.3.

The applicant should testify that by signing the application form, they understand if the well deteriorates over time or becomes damaged in such a way that the well is inoperable, state law and District rules require such a well to be plugged before a replacement well can be drilled.

5) Will the proposed water well comply with the spacing and production limitations identified in our rules? (TWC 36.116(a)(1-2), TWC 36.116(c)&(d) and Rule 6.10.24(b)), Rule 7.1 and Rule 9.5.2.

The well is located in the Edwards BFZ Management Zone described in District Rule 7.1 and will have a maximum column pipe size not to exceed 1 1/4-inches as declared in the application. Based on this column pipe size, a minimum size tract of 2-acres is required, with a 150-foot spacing requirement from other wells.

The District's rules require that we impose a production limit based on acre-feet/year and described gallons/year. If the proposed future operating permits cause an unacceptable level of decline in the water quality of the aquifer and/or artesian pressure, then the board may require production at levels necessary to reduce said depletion or degradation of the aquifer. In addition, the Board may reduce production necessary to prevent waste and achieve water conservation, minimize as far as practicable the drawdown of the water table or the reduction of artesian pressure, lessen interference between wells, or control and prevent subsidence.

Mike Keester, KT Groundwater, has reviewed the application, determined the anticipated drawdown, and provided the attached report.

Keester states in his conclusions and recommendations the following:

“The requested annual permitted volume is reasonable for the proposed use. The existing nearby Edwards (BFZ) wells are expected to experience negligible drawdown due to the proposed annual production. While water levels in the Edwards (BFZ) fluctuate with climatic conditions, we do not expect the proposed production to have a noticeable effect on the water levels in the existing wells in comparison to seasonal water-level fluctuations. Nonetheless, continued water-level monitoring will aid in assessing the long-term effects of cumulative groundwater production in the area. Upon future maintenance of the wells, we also recommend the applicant install a measuring tube, if one is not already installed, to assess actual changes in water levels due to pumping from the well and regional water level fluctuations.”

Additionally, the District, to the extent possible, must issue permits up to the point the total volume of exempt and permitted groundwater production will achieve the applicable Desired Future Condition (DFC) per TWC 36.1132(a)(b) and Rule 6.10.25(a)(b)(c)(d)(e).

7) Is the proposed use of groundwater consistent with the District’s Groundwater Water Management Plan related to the approved DFC and the defined available groundwater for permitting?

The District’s Management Plan reflects a groundwater availability figure in the Edwards BFZ Aquifer of 6,469 ac-ft/yr Modeled Available Groundwater (minus the reserve 825 ac-ft/yr for exempt well use) therefore 5,644 ac-ft/yr is the Managed Available Groundwater for permitting established by the District.

The Board, per the District Management Plan, has evaluated groundwater available for permitting the Edwards BFZ Aquifer and most recently evaluated the available groundwater for permitting, consistent with the management plan.

The requested permit amount relative to the modeled available groundwater MAG determined by the Texas Water Development Board (TWDB) based on the desired future conditions (DFCs) established by the District for the Edwards BFZ Aquifer was set by CUWCD based on maintaining spring flow. This was reviewed and again approved by the board in January 2019. To achieve this DFC, the TWDB used a model that indicated the MAG was equal to 6,469 ac-ft/yr from the Edwards BFZ.

HEUP & OP Permit Analysis and Exempt Well Reservations for the Edwards BFZ, per District Report, illustrates current Edwards BFZ Aquifer permits total 2,458.04 ac-ft/yr. Currently, the District has no other pending permits, thus 3,185.96 ac-ft/yr is available for permitting. See *attached Edwards BFZ Aquifer Status Report, February 12, 2025*.

8) What are the Modeled Available Groundwater calculations determined by the Executive Administrator of the Texas Water Development Board?

Refer to #7 above. The modeled available groundwater will not be exceeded by granting this permit. *See attached Edwards BFZ Aquifer Status Report, February 12, 2025.*

- 9) **What has the Executive Administrator of the Texas Water Development Board's estimate of the current and projected amount of groundwater produced under the exemptions in District Rule 6.3?**

Refer to #7 above. Reservation of Modeled available groundwater for exempt well use will not be exceeded by granting this permit. 825 ac-ft/yr is reserved and 361 ac-ft/yr is the total estimated exempt well use annually in the Edwards BFZ Aquifer. *See 2024 District Exempt Well Use Summary.*

- 10) **What is the amount of groundwater authorized under permits previously issued by the District?**

Refer to #7 above. Existing permits do not exceed the managed available groundwater (modeled available groundwater – exempt well use = Managed available groundwater) for the Edwards BFZ Aquifer which is 2,458.04 ac-ft/yr.

- 11) **What is the reasonable estimate of the amount of groundwater that is produced annually under existing non-exempt permits issued by the District?**

The total permitted amounts for non-exempt wells in the Edwards Aquifer in 2024 was 2,458.04 ac-ft/yr and the actual production in 2024 was 1,754.63 ac-ft/yr (71.33%) of the permitted amount. *Figures are based upon monthly production reports submitted to Clearwater by the permit holders in 2024.*

- 12) **Yearly precipitation and production patterns.**

Clearwater is currently in no drought management stage based on the PDI system (average running total annual rainfall). The PDI for the Edwards BFZ Aquifer in the District is currently at 33.388 inches of rain received in the last 365 days (*as of 2/11/2024*) calculated at 101.18% of annual expected rainfall of 33 inches. The Edwards BFZ Aquifer permit holders in all of 2024 used 71.33% of the total permitted amounts in the Aquifer. Permit holders did not exceed their total permitted amounts in 2020, 2021, 2022, and 2023.

Conclusions and Recommendations:

- 1) District GM recommends approving the permits as requested at production not-to-exceed 6.7 ac-ft/yr.
- 2) District GM recommends that all wells be equipped with a meter for monthly recording of production in accordance with District rules.
- 3) District GM recommends that the observation port on each well be utilized for monitoring water levels with an acoustic meter and allowing District staff to access the well at minimum quarterly as a part of their well monitor program.

KT Groundwater Technical Memo

Technical Memorandum

To: Mr. Dirk Aaron, General Manager –
Clearwater Underground Water Conservation District

From: Michael R. Keester, P.G.

Date: March 4, 2025

Subject: Hydrogeologic Evaluation of the Salado ISD Aggregate Well (N2-03-004G, N3-23-006G, N3-23-007G, N3-23-008G) Operating Permit Application

Well ID: N2-03-004G, N3-23-006G, N3-23-007G, N3-23-008G

Well Owner Name: *Salado ISD*

Tract Size: *45.59 Acres*

Column Pipe Size: *1.25 inch*

Aquifer: *Edwards (BFZ)*

Management Zone: *Edwards (BFZ)*

Proposed Annual Production: *Aggregated 6.71 Acre-Feet per Year*

Proposed Instantaneous Pumping Rate: *10 Gallons per Minute per Well*

The applicant indicated they use the existing wells for irrigation of athletic fields. The annual production requested from the wells is 6.71 acre-feet per year. The identified source for the proposed use is the local Edwards (BFZ) Aquifer. Based on the well records, the existing well *N2-03-004G* is completed to 140 feet below ground level (bgl), *N3-23-006G* is completed to 90 feet bgl, *N3-23-007G* is completed to 100 ft bgl, and *N3-23-008G* is completed to 100 bgl.

Projected Effect on Existing Wells

The potential effects of the proposed production on local water levels in the aquifer are calculated using the Theis equation¹ which relates water level decline (that is, drawdown) to the pumping rate of a well and properties of the aquifer. While the equation does not account for aquifer conditions which may affect the calculation of long-term water level declines (for example: aquifer recharge, faulting, or changes in aquifer structure), it does provide a very good, reliable, and straightforward method for estimating relatively short-term drawdown in and near a well due to pumping. To assess the potential effects from the proposed production, we assumed a transmissivity of 2,700 gallons per day per foot and a storage coefficient of 0.016 based on the regional groundwater availability model for the aquifer.

Table 1 presents the calculated drawdown at the proposed well and at other nearby wells completed in the same aquifer. For 1-Day Drawdown, we applied the proposed instantaneous pumping rate for a period of 24 hours. For 30-Day Drawdown, we assumed peak pumping during the summer of about 15 percent more than the average monthly amount (that is, the proposed annual production rate divided by 12 then multiplied by 1.15). For 1-Year Drawdown, we used the proposed annual production amount.

The predicted drawdown is based on our current understanding of the aquifer hydraulic properties and the estimated production from the proposed wells. The predicted drawdown values presented do not include the effects from other wells pumping near the proposed wells. Predicted drawdown of less than one foot is considered negligible for analysis purposes due to inherent uncertainty in the aquifer hydraulic characteristics, modeling limitations, and limited effect the drawdown would have on existing groundwater users.

In Table 1, we only included the nearest Edwards (BFZ) Aquifer well not operated by Salado ISD. The predicted drawdown in the closest nearby well is negligible. With the predicted drawdown due to the aggregated production being negligible at less than 300 feet, the predicted drawdown at wells further from the Salado ISD wells would also be negligible.

Table 1. Calculated drawdown at Salado ISD wells and other nearby wells completed in the local Edwards (BFZ) Aquifer based on an annual production rate of 6.71 acre-feet from the existing wells and instantaneous production of 60 gallons per minute.

Conclusions and Recommendations

The requested annual permitted volume is reasonable for the proposed use. The existing nearby Edwards (BFZ) wells are expected to experience negligible drawdown due to the proposed annual production. While water levels in the Edwards (BFZ) fluctuate with climatic conditions, we do not expect the proposed production to have a noticeable effect on the water levels in the existing wells in comparison to seasonal water-level fluctuations. Nonetheless, continued water-level monitoring will aid in assessing the long-term effects of cumulative groundwater production in the area. Upon future maintenance of the wells, we also recommend the applicant install a measuring tube, if one is not already installed, to assess actual changes in water levels due to pumping from the well and regional water level fluctuations.

N2-03-004G Application

Clearwater Underground Conservation District
Attn: Board of Directors
P.O. Box 1989
Belton, TX 76513

Dear Board Members,

I hope this letter finds you well. My name is Ted Smith, and I serve as the Chief Operations Officer for the Salado Independent School District. I am writing to formally request an operating permit for three of our existing wells: #N3-23-006G, #N3-23-007G, #N3-23-008G, and an amendment to aggregate these operating permits to our current HEU permit for well #N2-03-004G. We request an operating permit of 1.5 ac-ft/year for the three existing wells and for these to be aggregated with the current 1.5 ac-ft/year permit for a total of ~~6.0~~ ^{6.75} ac-ft/year as a four-well aggregated system.

Salado ISD seeks these permits for groundwater to help create and sustain safe athletic fields for student and community use. The need for groundwater as a beneficial use will be to maintain ground cover sufficient for turf management and the safety of the athletes using these fields.

As stewards of the publicly owned school district property, our goal is to provide our students with safe places to learn and grow. Athletic fields offer students the space to be physically active while increasing their interpersonal and communication skills. To counteract the prevalence of concussions, torn ligaments, and other impairments regularly suffered on undermaintained fields, we have committed to using our time, talents, and energy while responsibly using our natural resources.

We hope the Clearwater Underground Conservation District will recognize the school district's efforts to utilize groundwater in a responsible way that is sufficient to provide safe groundcover through our turf management program. We are committed to complying with all regulations and procedures set forth by your district to ensure responsible water use and sustainable development for our community.

Thank you for considering our request. Please do not hesitate to reach out if additional information or documentation is required.

Sincerely,

Ted Smith
Chief Operations Officer
Salado Independent School District

RE: Application for an Aggregated Operating Permit for Four Existing Wells

To Whom It May Concern:

I, Ted Smith, on behalf of Salado Independent School District, have submitted an application to the Clearwater Underground Water Conservation District (CUWCD) on February 13, 2025, for an operating permit for three existing wells (N3-23-006G, N3-23-007G, N3-23-008G), and an amendment to aggregate these operating permits to a current HEU and operating permit for well N2-03-004G.

An operating permit of 1.5 acre-feet per year is being contemplated for three existing wells (N3-23-006G, N3-23-007G, N3-23-008G). These permits would be aggregated with the current 1.5 acre-feet per year HEU permit and 0.71 acre-feet per year operating permit for a total of 6.71 acre-feet per year as a four-well aggregated system to produce groundwater for irrigation of the Salado ISD student athletic fields. Each of the wells are completed to the Edwards BFZ aquifer with a maximum 1 ¼-inch column pipe at a maximum pumping rate of 10 gallons per minute in the Edwards BFZ Management Zone described in District Rule 7.1.

- Well N2-03-004G is located on a 12.09-acre tract (PID #102187) on Salado School Road, Salado, Texas, Latitude 30.950109°/Longitude -97.540834°.
