Monthly Reports

October 7, 2026

Receive monthly reports and possible consideration and Board action on the following:

a) Drought Status Reports

b) Rainfall Report

c) Education Outreach Update

d) Monitoring Wells

e) Well Registration Update

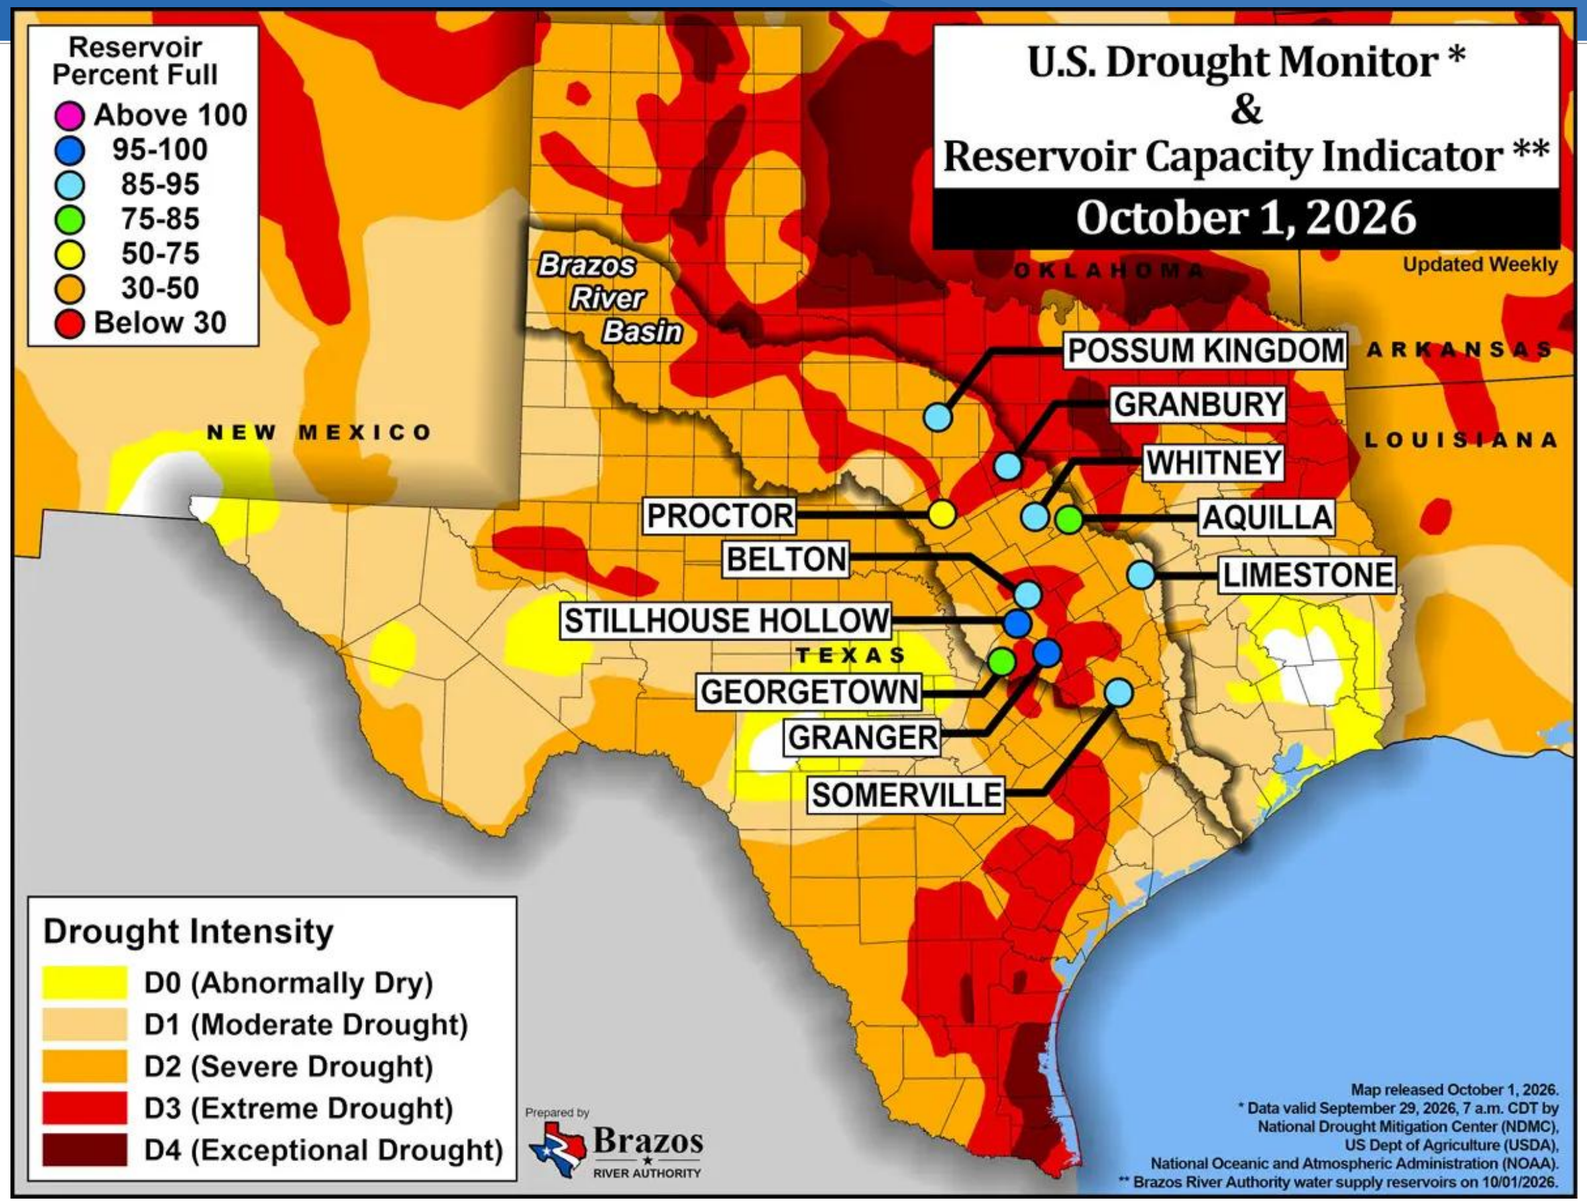
f) Aquifer Status Report & Non-Exempt Monthly Well Production Reports

Clearwater Underground Water Conservation District

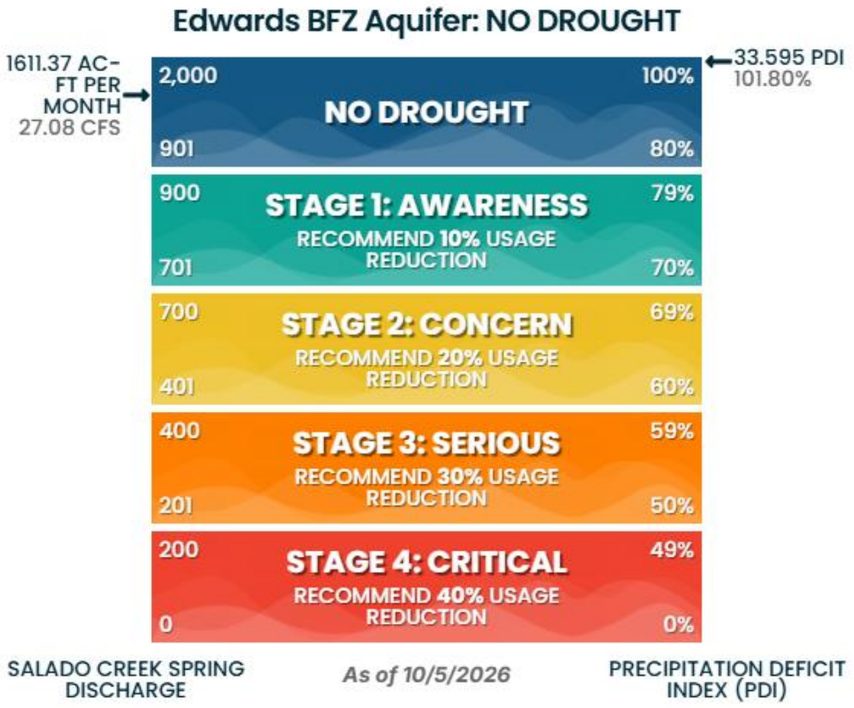
Every drop counts!

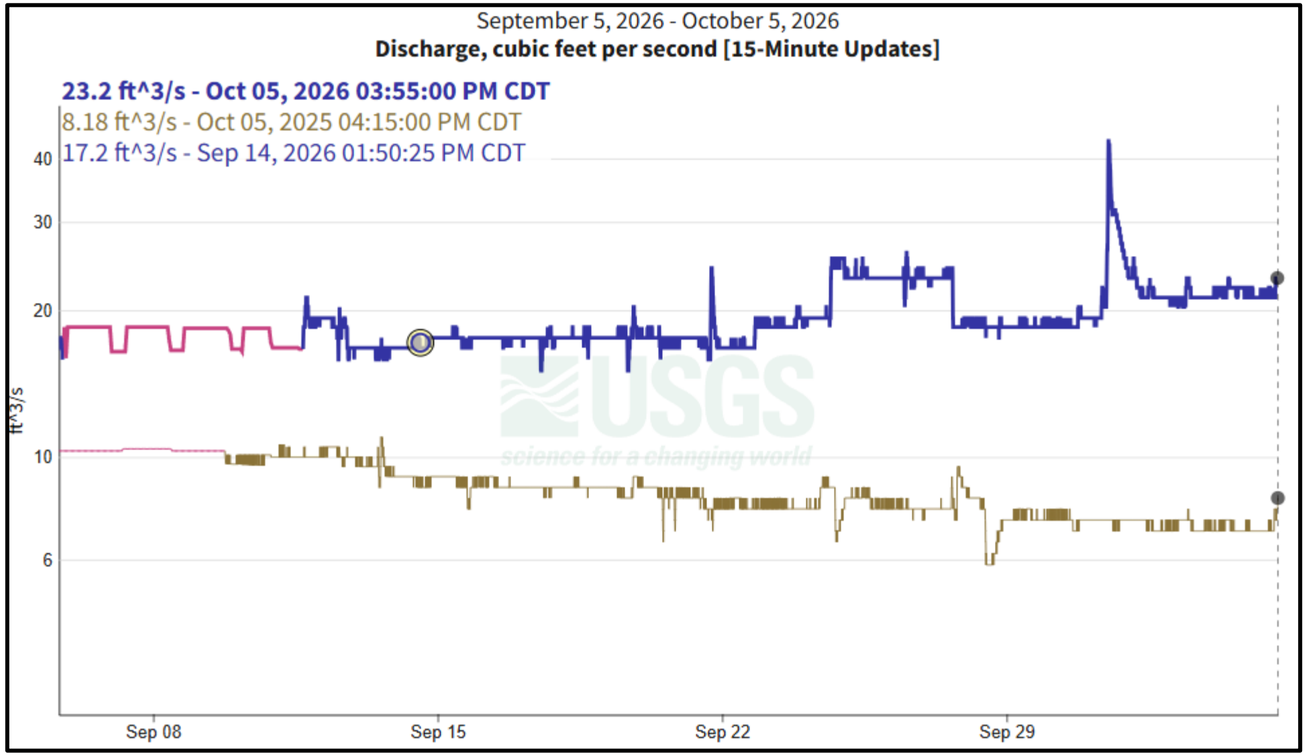
Agenda Item #12

US Drought Monitor & Reservoir Capacity Indicator



Edwards BFZ Aquifer Drought Status





Initiation and Termination of Drought Stages

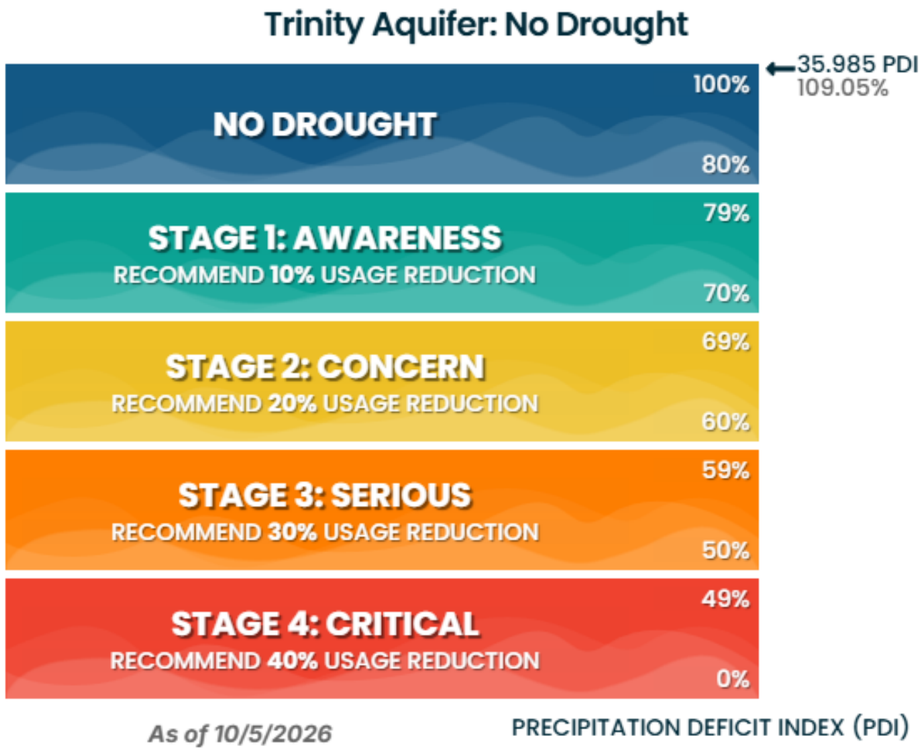
Initiation of Stages: The Precipitation Deficit Index (PDI), the daily maximum spring discharge, and average spring discharge values shall be monitored and presented to the District Board at the monthly Board meeting. Drought stages shall be triggered when either the PDI or the average spring discharge measured via stream flow gauges in Salado Creek fall below the trigger level for the periods described below:

- **PDI:** Monitored daily on a running-year basis over a defined area consisting generally of the area of the Edwards aquifer and contributing areas in Bell and portions of Williamson Counties and which is based on NEXRAD rainfall data provided by the National Oceanic and Atmospheric Administration. The PDI trigger condition must be exceeded for a period of 28 consecutive days.
- **Spring Discharge:** Monitored daily with the daily maximum discharge values averaged over a period of five consecutive days on a running five-day basis.

Termination of Stages: Drought stage in effect shall be reduced or terminated when both the PDI and the average spring discharge values are greater than the trigger conditions of the drought stage in effect for the period described below:

- **PDI:** Monitored daily on a running-year basis over a defined area consisting generally of the area of the Edwards aquifer and contributing areas in Bell and portions of Williamson Counties and which is based on NEXRAD rainfall data provided by the National Oceanic and Atmospheric Administration. The PDI trigger condition must be exceeded for a period of 42 consecutive days.
- **Spring Discharge:** Monitored daily with the daily maximum discharge values averaged over a period of seven consecutive days on a running seven-day basis.

Trinity Aquifer Drought Status



Initiation and Termination of Drought Stages

Initiation of Stages: The Precipitation Deficit Index (PDI values shall be monitored and presented to the District Board at the monthly Board meeting. Drought stages shall be triggered when the PDI falls below the trigger level for the period described below:

- **PDI:** Monitored daily on a running-year basis over a defined area consisting generally of the area of the Trinity aquifer and contributing areas in Bell and portions of Williamson Counties and which is based on NEXRAD rainfall data provided by the National Oceanic and Atmospheric Administration. The PDI trigger condition must be exceeded for a period of 28 consecutive days.

Termination of Stages: Drought stage in effect shall be reduced or terminated when the PDI value is greater than the trigger condition of the drought stage in effect for the period described below:

- **PDI:** Monitored daily on a running-year basis over a defined area consisting generally of the area of the Trinity aquifer and contributing areas in Bell and portions of Williamson Counties and which is based on NEXRAD rainfall data provided by the National Oceanic and Atmospheric Administration. The PDI trigger condition must be exceeded for a period of 42 consecutive days.

Educational Outreach

Educational Events

Direct engagement with Bell County residents remains a key priority for the District. Educational outreach events include the mobile classroom presentations, school programs, local forums, and civic presentations. The District's largest event is the annual Bell County Water Symposium.

District Communications

A variety of communication outlets provide information to target audiences. These include the District website, annual newsletters, quarterly updates via email, reports, published articles, and social media. All activities are documented for the District's annual report.

Education

Partnerships & Collaborations

The District maintains strong partnerships with local leadership, educational institutions, and municipalities. The District is represented in collaborative efforts with the Central Texas Water Alliance, Brazos G Regional Water Planning Group, and the Groundwater Management Area 8 Joint Planning Committee.

Tools & Resources

The District has developed and supported many tools and resources available to the public. Visit our website to use the District's interactive GIS maps, virtual bore tool, or the rainwater harvesting calculator. The District also has educational resources, handouts, and presentations to meet the educational needs of your group.

2026 Events

Date	Attendees	Event	Presentation	Booth
1/14/26	170	Bell County Crops Conference, Temple		X

Clearwater Underground Water Conservation District

Every drop counts!

CUWCD's Education and Outreach Program supports its statutory responsibilities under Texas Water Code Chapter 36. The program promotes regulatory compliance, groundwater conservation, water quality protection, drought awareness, and public understanding of groundwater resources in Bell County. Educational activities are integrated across all District management objectives and documented annually. Target audiences include the general public, well owners, permittees, teachers and students, real estate professionals, and elected officials.

Pending Applications: --

The desired future condition of the Edwards (BFZ) Aquifer is to maintain Salado Spring discharge into Salado Creek during drought conditions comparable to the 1950s drought of record. Preferred spring flow under such conditions is 200 acre-feet per month, with a minimum acceptable flow of 100 acre-feet per month. Based on this condition, TWDB GAM Run 21-013 estimates the modeled available groundwater (MAG) value for the Edwards (BFZ) Aquifer in Bell County at 6,469 acre-feet per year for 2020–2080. By 2070, exempt use is projected to reach about 825 acre-feet per year, leaving approximately 5,644 acre-feet per year available for permitting. The District monitors Salado Spring discharge in 15-minute intervals with the U.S. Geological Survey maintaining a gage station downstream of the spring complex. The District updates its drought status which may require reductions in non-exempt groundwater production from the Edwards Aquifer to ensure achievement of the adopted desired future condition for the Edwards Aquifer.

To manage groundwater in the District, CUWCD subdivides the water-bearing geologic units into the three Trinity Aquifer subdivisions as follows: the Upper Trinity (Glen Rose Limestone and Paluxy Sand); the Middle Trinity (Hensell Sand); and the Lower Trinity (Hosston Conglomerate) aquifers. The desired future conditions (DFC) for the water-bearing units describe the amount of water-level draw down which may occur after 71 years when the draw down is averaged across the area of occurrence of the water bearing unit in the District. The total of modeled available groundwater (MAG) values for the Trinity Aquifer in Bell County, as given in GAM Run 21-013 MAG for decades from 2020 through 2080 is 9,275 acre-feet per year which is based on the amounts of groundwater that could be pumped while maintaining the desired future conditions in each water-bearing geologic unit.
